

McAfee® internet security suite

comprehensive security for online piece of mind

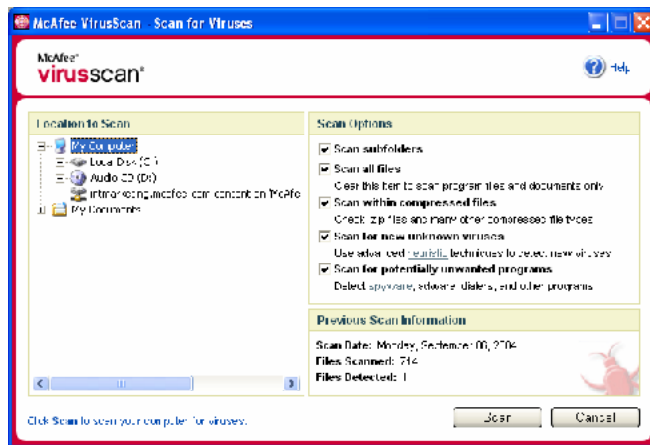

2005 version 7.0

Enjoy everything the Internet has to offer? without the worry of online threats. McAfee® Internet Security Suite provides powerful, comprehensive protection for Internet users. Built on McAfee's award-winning technologies, the suite provides one of the most comprehensive, integrated security and privacy toolsets available, including full versions of:

- McAfee® VirusScan®
- McAfee® Personal Firewall Plus
- McAfee® Privacy Service
- McAfee® SpamKiller

Destroys viruses and virus-like threats

McAfee® VirusScan® automatically identifies known viruses, mass-mailing worms and Trojans that may present a threat or create problems. Any suspicious files are immediately identified and, if possible, automatically cleaned. Those files that cannot be cleaned can then be either deleted or quarantined.

McAfee VirusScan provides out-of-the-box protection against malicious threats

IMPROVED! Inbound and outbound email scanning detects and removes mass-mailing worms, viruses and Trojans before they reach your computer's hard drive.

IMPROVED! Detection at multiple entry points, including email, instant message attachments, and Internet downloads.

WormStopper? monitors suspicious mass-mailing behaviors and notifies users once these activities have been detected.

ScriptStopper? technology helps prevent new, script-based threats like the Love You? virus.

Identifies spying and pop-up advertisement programs

More often than you may think, your online activity may be tracked by unsolicited third parties, threatening your privacy and data security. McAfee VirusScan detects potentially unwanted programs (PUPs) including spying and pop-up ad programs like spyware, adware and web dialers that may collect personal information without permission.

Safeguards your online financial transactions

When suspicious third parties attempt to connect to and from your computer, McAfee® Personal Firewall Plus blocks Internet traffic that you do not want allowed. This provides greater protection and confidence while you are using the Internet to conduct confidential or private transactions.

Enhanced! Intrusion detection system detects common attacks, and logs them in an Internet Events section.

Improved! Hacker tracing turns the tables on attackers and aids in tracing them back to their source.

Exclusive! Hackerwatch.org integration links to an anti-hacking database and Worldwide Hacker Activity Map, offering tips on responding to specific attacks, self-testing tools and channels to e-mail online authorities of hacker events.

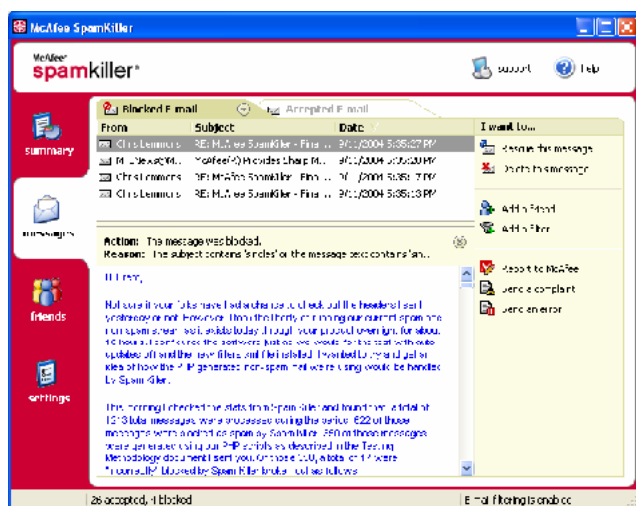

View active application connections and traffic monitor that displays active application usage across your Internet connection.

Protecting your identity and privacy
McAfee® Privacy Service's powerful features allow you to manage your online experience, making it easy to block the transmission of private information and to filter undesirable content.

Enhanced! Identity theft protection asks permission before personally identifiable information (PII)-e.g., PINs, bank accounts, Social Security numbers and family names-are sent from your PC.

New! McAfee® Shredder helps permanently delete file traces from your hard drive, removing digital footprints that hackers and other identity thieves look to exploit to recover personal data.

Block unwanted and inappropriate e-mail
McAfee® SpamKiller's multi-layered filtering process uses state-of-art Bayesian technology plus signature-based filters to eliminate spam. This extremely effective multi-layered approach combines machine-based, user-based and community-based learning capabilities to identify and block spam. Together these filtering processes analyze blocked and accepted messages to train the core filtering engine make future decisions on what is spam and what is legitimate e-mail.

McAfee SpamKiller provides an easy to navigate user interface that allows you to review blocked and accepted spam.
