

McAfee® personal firewall plus

a barrier against hacker break-ins

2005 version 6.0

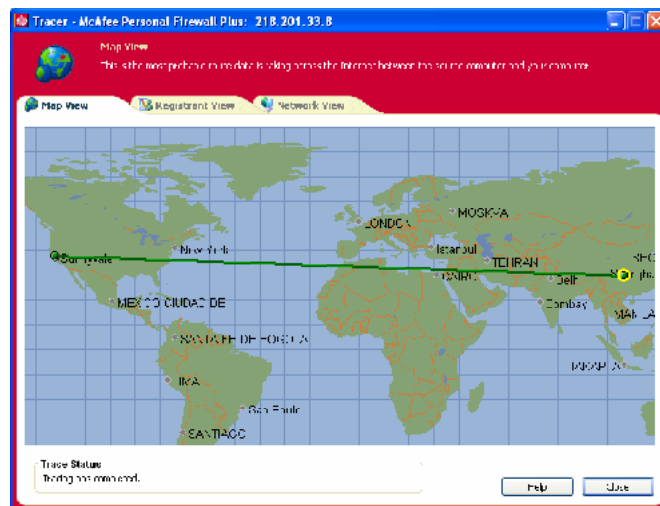

Easy to install and use, McAfee® Personal Firewall Plus continually safeguards your online communications - which is equally critical for both high-speed and dial-up Internet users. This essential protection works with DSL, cable modem, satellite, dial-up and wireless connections, and is easily configurable to protect single PCs or an entire home network. Personal Firewall Plus helps protect against the unauthorized access of your PC and personal data. Without a firewall hackers can steal your private information, such as credit card numbers, tax records, and passwords.

Safeguards your online financial transactions
When suspicious third parties attempt to connect to and from your computer, McAfee Personal Firewall Plus helps block Internet traffic that you do not want allowed. This provides greater protection and confidence when you are using the Internet to conduct confidential or private transactions.

Safeguards against masquerading applications that other firewalls might miss.

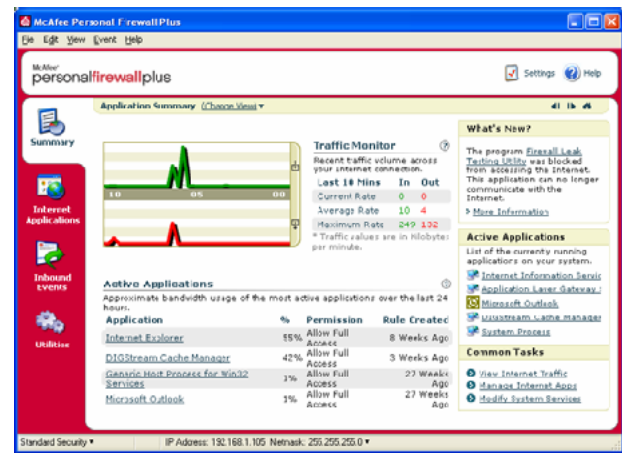

Enhanced! Intrusion detection system detects common attacks, and logs them in an Internet Events section.

Improved! Hacker tracing turns the tables on attackers and aids in tracing them back to their source.

Like caller ID for your Internet connection, quickly gain information that can be used to report hackers to their ISPs and other security monitoring authorities.

Improved! Intelligent application handling automatically denies outbound Internet access to malicious applications that might secretly transmit personal data to hackers, while allowing trusted programs to connect without unnecessary alerts or false alarms.

View active application connections and a traffic monitor that displays active application usage across your Internet connection.

Exclusive! Hackerwatch.org integration links to an anti-hacking database and Worldwide Hacker Activity Map, offering tips on responding to specific attacks, self-testing tools and channels to e-mail online authorities of hacker events.

Protects your personal data from online intruders

McAfee Personal Firewall Plus helps guard your personal data against hostile online intrusions, including denial-of-service attacks and backdoor Trojans attempting to remotely seize control of your PC. Activity logs are generated while these types of attempts are made, providing the option to review and report events to ISPs, law enforcement officials and anti-hacker authorities.

McAfee® personal firewall plus

Helps prevent identity theft

Internet hackers know thousands of ways to break into vulnerable PC systems. In seconds, they can steal private files, credit card information, tax records, passwords and Social Security Numbers. Remote thieves can even hijack your system to send spam messages. Or plant destructive viruses.

Enhances anti-virus defenses such as McAfee® VirusScan®

McAfee Personal Firewall Plus' advanced technology constantly monitors Internet traffic activities, including when hackers attempt to install Trojans or viruses onto your PC. McAfee Personal Firewall Plus works together with McAfee® VirusScan® to create a multi-layered defense against sophisticated 'blended' virus threats that attempt to take advantage of several vulnerabilities.

New! Advanced worm protection helps stop virus-like worms from spreading.

Inbound-outbound connection monitoring helps block unauthorized communication from hackers, unknown computers, malicious code, denial-of-service attacks and remote-control Trojans left behind by viruses.

Updates automatically to protect against new threats

Through automatic online updates, McAfee Personal Firewall Plus protects against the latest hacker techniques and tricks. These effortless updates help anticipate new threats? keeping pace with ever-changing technology and offering you the best protection available.

McAfee Personal Firewall Plus provides an easy-to-use interface for managing your computer security and provides out-of-box protection as soon as it's installed.

Establish access rules to allow or deny specific application outbound Internet connections.
