

McAfee® quickclean™

clutter removal for peak PC performance

2005 version 5.0

It's frustrating when a computer slows down. While you might falsely assume it is outdated, the problem may be much easier and more cost-effective to solve. Simply going online could be causing the problem. Using the Internet and e-mail results in a lot of unnecessary files being saved to your PC that can affect your computer's performance — simply removing this “debris” from your computer can help keep it working at its optimum.

McAfee® QuickClean™ provides a set of efficient and easy-to-use tools that safely remove digital debris to free up valuable disk space, while keeping sensitive data private. Temporary web pages, browser cookies, Most Recently Used (MRU) histories, key registries, and unused files build up over time, and can compromise online privacy and security. McAfee QuickClean helps ensure this unwanted personal information is safely removed, via a digital shredder, to optimize your computer's security and performance.

The McAfee QuickClean user interface allows you select which files to delete when clearing your temporary Internet browser files.

Enhances privacy with a digital document shredder

Even when you delete files from your computer, they may not be completely wiped from the hard drive. Erased files leave digital footprints that hackers or other unauthorized users can access.

McAfee's digital shredder technology ensures this data is completely erased, which is especially critical for files containing sensitive and confidential information.

Removes unnecessary programs, files and folders

McAfee QuickClean helps remove the clutter that unknowingly accumulates when you use the Internet, including cached web page files, browser cookies and ActiveX controls. Unwanted e-mail messages and attachments are deleted to improve your system's operating performance. For additional convenience and security, McAfee QuickClean can be easily configured to erase cached files every time a browser is closed.

Customizable file cleanup allows you to free up disk space according to personalized criteria, including files that are a certain age, files in certain folders, and files of a certain size.

Improved! McAfee Shredder helps permanently delete file traces from your hard drive, removing digital footprints that hackers and other identity thieves look to exploit to recover personal data.

E-mail cleanup supports Microsoft® Outlook®, Outlook Express, and other MAPI-compliant e-mail programs.

Most Recently Used (MRU) file cleaning of popular Microsoft® Windows® applications is automatically done to increase privacy.

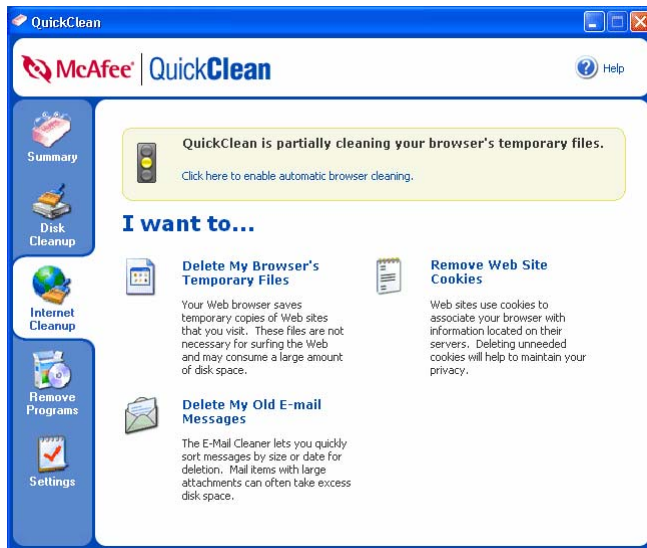

User friendly interface makes it easier than ever to use McAfee QuickClean.

Advanced privacy controls allow you to delete confidential information, including your Internet web trail.

Exclusive! Best-Selling McAfee uninstaller technology frees you from time-consuming manual file removal.

Clears up valuable disk space

Often, after a program is uninstalled, many associated files and folders still remain on the hard drive. The Application Remnant Cleaner (ARC) removes specified programs, including related shortcuts and registry entries, to free up valuable drive space.

The "Internet Cleanup" options allow you to choose the right cleaning for your specific needs.

Application Remnant Cleaner (ARC) helps ensure that all remaining files and folders are removed after an application has been uninstalled.

Easy-to-Use Controls provide convenient program wizards to help create custom cleaning rules and automate everyday cleanup tasks, for example, erasing cached files every time you close your browser.

Updates automatically to protect against new threats

McAfee QuickClean keeps up with evolving Internet threats in order to ensure all pertinent debris is removed.

To simplify things even further, application wizards provide a simple step-by-step approach to getting the most out of McAfee QuickClean. The configuration wizard, capable of creating custom cleaning rules, is just one of the wizards that show how easy it is to automate tasks, avoid errors, and save time.

System Requirements

Windows XP/XP Pro/2000

- 233 MHz or higher processor
- 64 MB of RAM (128 recommended)
- 35 MB of available hard disk space
- CD-ROM/DVD drive
- Microsoft® Internet Explorer 5.5 or later

Windows 98/ME

- 150 MHz or higher processor
- 32 MB of RAM (64 recommended)
- 35 MB of available hard disk space
- CD-ROM/DVD drive
- Microsoft® Internet Explorer 5.5 or later

Works with Microsoft®
Windows® XP, 2000,
ME & 98
